Java

```java
class Solution {
    public String stringShift(String s, int[][] shift) {

    }
}
```

JavaScript

```javascript
/**
 * @param {string} s
 * @param {number[][]} shift
 * @return {string}
 */
var stringShift = function(s, shift) {

};
```

TypeScript

```typescript
function stringShift(s: string, shift: number[][]): string {

};
```

C++

```cpp
class Solution {
```

```cpp
public:
    string stringShift(string s, vector<vector<int>>& shift) {

    }
};
```

C#

```csharp
public class Solution {
    public string StringShift(string s, int[][] shift) {

    }
}
```

Kotlin

```kotlin
class Solution {
    fun stringShift(s: String, shift: Array<IntArray>): String {

    }
}
```

Go

```go
func stringShift(s string, shift [][]int) string {

}
```
